Humphrey Repton (Bury St Edmunds 1752 - Romford 1818)

A Scene in the Garden at Brandsbury, Willesden

inscribed 'A Scene in the garden at Brandsbury, seat of Lady Salisbury' on the original washline mount
watercolour
14.3 x 21.7 cm (5¾ x 8½ in)

Humphrey Repton began his career in landscape design in 1788 and went on to work on over 400 projects. Repton documented his plans in his Red Books (so-called due to their red morocco leather binding) in which he included watercolours of the landscape as it was, with a flap that folded down showing his proposed changes to the view. The book was used as a form of proposal or marketing of his skills. The present work differs from the scene in the Brandsbury *Red Book* (in Dumbarton Oaks Library) only by a reclining, not standing cow. It is the same image that appears in *Sketches and Hints on Landscape Gardening* (London, 1795, opp. pg.3). This image would have been the a variant design and the image appearing in the Red Book the modified version. The fact that these variants exist shed an interesting light on Reptons design process. Repton started work on the gardens at Brandsbury in 1789. The project was considered an illustrious one as the estate extended "two miles in length from the toll-gate of Kilburn turnpike, and is therefore one of the largest landed properties within so short a distance of London".¹

The present work came from an album which also contained Humphrey Repton's business card.

We would like to thank Professor Stephen Daniels, author of *Humphrey Repton: Landscape Gardening and the Geography of Georgian England* (Yale, 1999) for his assistance in the preparation of this catalogue entry.

We would also like to thank Charles Hind for his assistance in the cataloguing of this lot.

Artist description:

The eldest son of a tax collector, Repton attended Norwich Grammar School, concluding his schooling with three years in the Netherlands. He was then apprenticed to a Norwich textile merchant and, after his marriage to Mary Clarke in 1773, was established in business by his father. In 1778, following the death of his parents, he resolved to live as a gentleman farmer, moving to Sustead Old Hall, Norfolk. The landscape sketches he made around this time (Norwich, Castle Museum)—the first indication of where his future career lay—were engraved for M. J. Armstrong's *History and Antiquities of the County of Norfolk* (1781). He became a friend of William Windham of Felbrigg, travelling to Ireland as his private secretary in 1783, and acted as election manager on Windham's entry into Parliament in 1784. Windham's agent, Nathaniel Kent, taught Repton estate management, and from another neighbour, Robert Marsham of Stratton Strawless, he learnt about arboriculture. He moved c. 1786 to a smaller cottage at Hare Street, Romford, Essex, where he was to spend the rest of his life.

In June 1788, five years after the death of 'Capability' Brown, Repton decided to combine his own various talents by becoming a landscape designer. He began to acquire technical knowledge, while using the political and social connections made earlier at Sustead to build up a list of clients. By 1792 he had been consulted in connection with about a hundred places, but the following year war with France broke out, and Repton's commissions were halved, dropping from over twenty per year (1790–93) to under ten (1794–1802).

In 1789 Repton, consulted over Ferney Hall, Salop, asked the advice of Richard Payne Knight, whose Picturesque improvements at Downton, Hereford & Worcs, he admired. He was also introduced to Sir Uvedale Price of Foxley, Hereford & Worcs, whom he joined in a trip on the Wye in 1790 or 1791, but relations soon soured between Repton, defender of utility and convenience in garden design, and these two connoisseurs of Picturesque beauty. This exploded into the so-called 'Picturesque Controversy' in 1794 with Knight's publication of *The Landscape*—satirical verses directed at Repton's proposals for Tatton Park, Ches. Repton replied in *Sketches and Hints on Landscape Gardening* (1795). A printing delay meant that he also saw the publication of Price's *Essay on the Picturesque* (1794), which he answered in a separately printed letter in July of that year. The debate swiftly became a popular topic of discussion, with both sides and their supporters continuing to publish sallies for the rest of the decade and beyond.

Repton's professed aim was to be as renowned an architect as landscape gardener, but the extent of his unaided architectural work is difficult to assess, and he seems to have been in constant quest for the ideal architectural collaborator. Prior to Nash, his partner had been William Wilkins (1751–1815) of Norwich, who contributed to at least eight commissions between 1789 and 1793, and to whom he apprenticed his son John Adey Repton (1775–1860). However, it was not until Repton took John as his partner in 1800 that he found a really satisfactory relationship with an architect. John was an antiquarian and a Gothic Revivalist, and together they produced a number of significantly early designs in what they styled 'Queen Elizabeth's Gothic'.

Repton's designs, like those by Brown, were derived from a Claudian ideal of 'natural' landscape; his departure from Brown's style lies in a greater attention to low foreground planting, based on the study of native woodland, and in a more loosely formed type of plantation than the Brownian clump. With Repton, plantations of trees characteristically swept down from a hill or formed a dark background to the house.

Unless the site was overlooked, he disliked an enclosing outer belt of trees, preferring to allow excursive views to beyond the park boundary. Ever the empiricist, he studied the characteristics of each site, wishing only to enhance each with a sympathetic design to suit the particular practical needs of the individual client. Thus convenience would be united with a modified Picturesque beauty.
